2. Description of the discipline

Short annotation of the course, relevance.

The discipline «Sociology and Medical Sociology» is aimed at forming the foundations of «sociological imagination» in future physicians, lays the foundations of knowledge in medicine and health care as a social institution. Studies the relationship between health and social aspects of human life, considers the use of special sociological theories and methods for multifaceted analysis of the origin, course and prevention of various diseases.

Studying the course is important for a number of reasons:

- the need for the formation of integrated ideas about society and understanding of their own social context;
- understanding the health care system as an element of a holistic social system, the place and status of physicians as a separate social group in society;
- the importance of skills of sociological research, methods of conflict prevention and resolution in the performance of professional duties of a doctor;
- Awareness of the doctor of the social preconditions for the occurrence of diseases, as well as the social context of treatment of various types of health disorders.

Prerequisites. For successful mastering of discipline, the student needs the knowledge received in the course of studying of the following general disciplines:

For successful mastering of the discipline students need knowledge gained in the process of studying the following disciplines of general training in secondary school: «Man and the World», «Civic Education», «Fundamentals of Law», «Fundamentals of Health».

The purpose of the course and its significance for professional activities is to master students' skills of sociological analysis of society, determining their place and role in it, forming an understanding of the functioning and development of medicine and health care as a social institution, the relationship of health and social aspects of life people, the application of sociological knowledge in life and medical practice.

Postrequisites. In the process of studying the discipline, a student acquires knowledge, which is necessary for successful mastering of professional training disciplines, namely: «History of Ukraine and Ukrainian culture», «History of world culture», «Fundamentals of economic theory», «Economics

of health care. Marketing of medical services», «Philosophy», «Logic. Formal logic». «Aesthetics and Theory of Art», «Ethics and deontology in medicine», «Methods and Technology of the Student's Scientific Work Preparation», «Academic Decency», «Fundamentals of psychology», «Medical psychology», «History of Medicine», «Social medicine, public health», «Principles of forming a healthy lifestyle», «Life safety, basics of bioethics and biosafet», «Civil Defense», «Hygiene and Ecology», «Efficient communication as indicator of productive interaction between doctors and patients», «Forensic medicine and medical law of Ukraine» which involves the integration of teaching with these disciplines and the application of acquired knowledge, skills and abilities in the process of further education and professional activities.

3. Learning outcomes.

After successful study of the discipline the applicant will be able to:

- to analyze the patterns of formation of the social structure of society, scientific approaches to the problem of society development;
- understand the essence of the process of socialization, acquisition of social status and role;
- explain the causes of conflict and ways to overcome them;
- to determine the main directions of research in medical sociology and methods of their conduct;
- to determine the place of physicians as a social group in the social structure of society;
- take into account in professional activities the social status of the patient, his social roles as a means of influencing the patient for his effective treatment;
- determine the role of social and socio-psychological factors in the spread of disease;
- use knowledge of resocialization and lifelong socialization when working with critically ill and injured patients;
- apply the acquired knowledge of sociology of medicine and sociology of health care to establish appropriate relationships with patients and colleagues.

4. Content and logistic of the discipline

Module 1. Sociology and medical sociology	I semester 75 hours / 2,5 credits	Lectures №№1–5 Practical classes №№1–15 Topics for self-study №№1–5
--	--------------------------------------	---

The course includes 10 topics, which are divided into 1 thematic modul.

- Topic 1. Sociology as a science about society
- Topic 2. The methods of sociological researches
- Topic 3. Historical development of sociology
- Topic 4. Social structure of a society
- Topic 5. Social stratification
- Topic 6. Sociological concept of a person. Socialization
- Topic 7. Social behavior.
- Topic 8. Sociology of the conflict
- Topic 9. Sociology of medicine. Social conditions of diseases
- Topic 10. Sociology of a family

The lecture course discovers the problematic issues of the relevant sections of sociology

Practical classes provide a theoretical justification of the main issues of the topic and the acquisition of the following practical skills:

1. navigate in different directions, trends and schools of sociological science, connect theoretical ideas and concepts with the practice of society, professional activities in the field of medicine and health care, modern problems of society;
2. be able to objectively, on a scientific basis to assess the state and development of society, to apply the acquired knowledge in everyday life and professional practice;
3. anticipate the prospect of implementing theoretical statements of medical sociology in combination with medical disciplines;
4. choose methods of conflict prevention and resolution;
5. to apply in practice knowledge of the social structure of society and social movements in planning their own careers;
6. take into account the interests of certain communities in making management decisions
7. independently analyze the data of sociological research, operate with methods of sociological research in practice in combination with professional knowledge;

In practical classes, students report, discuss, reasonably defend their views and positions, formulate conclusions on the topic and solve tests.

The student's independent work involves preparation for practical classes, studying topics for independent extracurricular activities, preparation of presentations, tables, albums, posters, elaboration of scientific literature and writing reviews on the provided topics. Control of mastering the topics of independent extracurricular work is carried out in the classroom and the final control of the discipline.

Thematic plans of lectures, calendar plans of practical classes, thematic plan of independent extracurricular work, volume and directions of individual work are published on the site of the department.
